List of Frequently Asked Questions

How do I add a new question and answer?	2
Why is there a label in the code for the previous question?	2
How do I change the title and subtitle?	2
Is it possible to change the spacing between the questions in the list of questions?	2
What if I want to hide the page numbers and/or trailing dots next to the question in the list of questions?	2
Is it possible to number questions?	3
Question 7: Can I change the color of the question boxes?	3

Print via ssh

First we need to ssh into the machine on the network:

```
igor@igor-HP:~$ ssh bogoslai@kiew.informatik.uni-freiburg.de
```

This actually corresponds to the mask:

```
<user>@<your_local_machine_name>:~$ ssh <username_on_remote_machine>@<name_of_r
```

Then we would like to see which printers are on the network:

```
[bogoslai@kiew ~]$ lpstat -p -d

printer hp04 is idle.   enabled since Fri 26 Jul 2013 11:49:25 AM CEST
printer hp14 is idle.   enabled since Fri 26 Jul 2013 01:57:44 PM CEST
    Ready to print.
printer hp15 is idle.   enabled since Fri 26 Jul 2013 02:04:53 PM CEST
    Ready to print.
printer hp17 is idle.   enabled since Fri 26 Jul 2013 01:52:15 PM CEST
    Ready to print.
printer hpcolor is idle. enabled since Fri 26 Jul 2013 01:38:33 PM CEST
    Ready to print.
system default destination: hp15
```

Now we are actually able to choose the printer we want to use and print:

```
lp -d hpcolor Example.pdf
```

The mask of this is:

```
lp -d <name_of_printer> <filename>
```
